

JOFI Assessments Score System

Assessment scores are reported on a scale of 1 to 9. A 1 indicates the person is low on that element and a 9 indicates the person is high on that element. Generally speaking, if we test 100 people, the number of people at each score level will be:

Level 1	4 people	Extremely Low
Level 2	7 people	Very Low
Level 3	12 people	Low
Level 4	17 people	Typical
Level 5	20 people	Typical
Level 6	17 people	Typical
Level 7	12 people	High
Level 8	7 people	Very High
Level 9	4 people	Extremely High

Note that scores are not evenly distributed between the 9 levels. In fact, the majority of test takers will score in the 4-6 range (in our example, 54 out of 100 test takers). The 4-6 range indicates an average level of the element being measured, so you can expect most people to score in this range. Fewer people will score in the 1-3 range (noticeably low) or the 7-9 range (noticeably high).
